

Venkata Balaji Boppudi

AI Trainer

+91 6303612803 | venkatabalaji00007@gmail.com | Guntur, Andhra Pradesh, India | [LinkedIn](#) | [GitHub](#)

SUMMARY

AI Trainer with 1.5+ years of experience in delivering practical training in Artificial Intelligence and Machine Learning. Skilled in developing hands-on labs and teaching Generative AI and LLM concepts. Experienced in simplifying complex ML workflows for both technical and non-technical audiences. Proficient in Python, TensorFlow, and NLP, with a strong focus on real-world applications and effective learning outcomes.

EXPERIENCE

AI Trainer, 1M1B (One Million for One Billion), Bengaluru (Remote) Jun 2025 — Present

- Deliver technical workshops on Artificial Intelligence, covering machine learning fundamentals, generative AI, and modern AI technologies for diverse learner groups.
- Develop structured sessions explaining ML workflows, supervised learning, neural networks, and practical industry use cases to bridge theory and real-world application.
- Present and demonstrate emerging technologies including Generative AI and Large Language Models (LLMs), highlighting practical implementations and best practices for deployment and evaluation.
- Build hands-on materials and exercises to simplify complex concepts and accelerate skills adoption, enabling learners to apply trained models and ML pipelines to real problems.

Data Analyst, Intecog Logistic Private Limited, Hyderabad Dec 2024 — Jun 2025

- Preprocessed and cleaned complex sensor and time-series datasets using Pandas and NumPy, resolving missing timestamps, irregular intervals, noisy readings, and outliers to ensure reliable input for modeling pipelines.
- Engineered statistical and pattern-detection workflows to identify operational trends and failure-prone behaviors, improving early-warning accuracy for maintenance planning.
- Analyzed large-scale time-series streams in near real time to detect operational anomalies, reducing detection latency and improving monitoring efficiency.
- Built automated preprocessing pipelines to standardize and validate incoming telemetry, enabling consistent downstream modeling and reporting.

PROJECTS

Time-Series Analysis of Sensor Data

- Analyzed 90+ days of continuous temperature sensor readings, performing data preprocessing to remove noise, duplicates, missing timestamps, and corrupted values to ensure high-quality inputs for modeling.
- Conducted TS-EDA using descriptive statistics, time-based aggregation, and visualizations (box plots, moving averages) to uncover periodic behaviors and operational deviations.
- Built reproducible analysis pipelines in Python using Pandas, NumPy, Matplotlib, and Seaborn to standardize preprocessing and visualization steps.
- Implemented threshold-based outlier detection and feature engineering, improving data integrity for downstream modeling and enabling consistent, reproducible processing.

EDUCATION

Kallam Haranadhareddy Institute of Technology, Guntur, India - *B.Tech, Artificial Intelligence and Machine Learning* - (GPA: 7.62) 2020 — 2024

SKILLS

Programming	: Python, SQL
Libraries	: Pandas, NumPy, Matplotlib, NLTK, Scikit-Learn, TensorFlow
Platforms	: VS Code, Jupyter Notebook, GitHub
Soft Skills	: Time Management, Problem-Solving, Communication
Other Skills	: Model Validation, Feature Engineering, Deep Learning, NLP
Languages	: Telugu, English
